- 28 X Array Bracket Set**
- 16 X RS Caster Plates**

The PAS RS.LA is a fully integrated line array package for front of house applications. Designed as a cost-effective alternative to other line array systems, the PAS RS.LA utilizes patented TOC™ technology to provide greater intelligibility from a more compact enclosure. The flexibility of the RS.LA, coupled with its superb performance, allows it to satisfy artists' line array riders at a fraction of the cost of competitive systems. This unique packaged system features 16 RS.LA cabinets, six amplifiers, two amp racks with custom I/O panels and an RS processor as well as all the necessary speaker cables, 16 RS.LA caster plates, 28 sets of connecting hardware and two flying frames. It's essentially a "plug and play" system that's ready to fly, right out of the box. As configured the RS.LA will cover an audience of at least 10,000 people. However, since the system is fully scaleable, larger venues can be accommodated with relative ease by adding RS.LA enclosures in blocks of eight with one drive rack per block.
